Renovation of ladle sliding gates

The technology of sliding gates renovation consists of drilling of the used parts of the sliding plate away, inserting of a special ceramic ring with the required diameter into the drilled hole, filling of the drilled part of the lower plate with refractory concrete, drying in electric furnace and surface grinding of the plate with dimensional accuracy of 0.03 mm.

Repairable systems:
- SIRMASTOP
- FLOCON 6300
- FLOGATES 1406
- INTERSTOP
- META CON
- others

Packing: On wooden pallets, banded.
